

MY HEALTH VERSE

INTRODUCTION

MyHealthVerse is a cryptocurrency seeking to introduce the world of health-related biodata to the blockchain universe as well as to the public. This will come about by launching the only Marketplace exclusively for Biomarkers NFTs, a pool of minted biomarkers and synthetic data gathered and analyzed into NFTs using Artificial Intelligence. MyHealthVerse Marketplace will not only host but will also classify those Biomarkers NFTs which will then be uploaded for sale to healthcare stakeholders, such as pharmaceutical companies, and anyone interested in this project. By categorizing Biomarkers NFTs, the Marketplace becomes even more user-friendly to access, as it will help buyers navigate our Marketplace effortlessly, understand the wide selection in our repository, thus encouraging them to purchase tokens in exchange for Biomarkers NFTs. By obtaining our tokens, the buyer can customize and create a bundle of Biomarkers NFTs, tailor-made to their needs. In this way, they can exploit them to the fullest in whichever way they please.

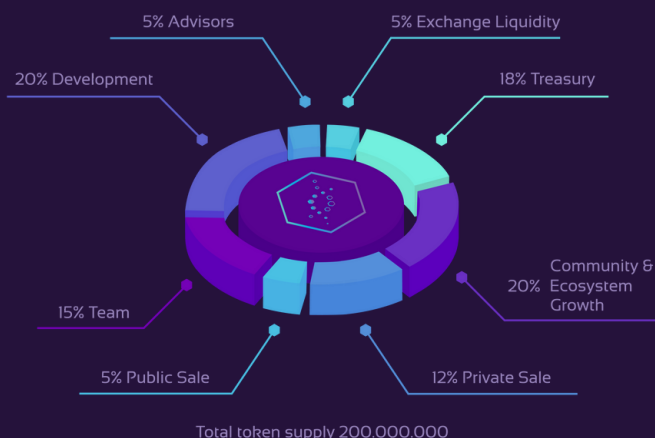

OUR MISSION

MyHealthVerse aims to address current challenges that impede the crypto custodial experience for the public by combining security, simplicity and accessibility of cryptocurrencies into a cohesive platform. Our mission is for "Biomarkers to Reach New Heights" by offering investors an innovative, user-friendly, one-stop-shop to find Biomarkers NFTs that they need to buy, sell, hold and decide whether to choose PHARMA or not. Our objective has always been to make buying and selling Biomarkers NFTs as simple as possible, while simultaneously being a leader in security, accessibility, reliability, and custody.
